

New Cyber Security Operations Centre

Overview

Project Title:
New Cyber Security Operations Centre

Client:
Falanx Assuria

Sector:
Security

Completion:
March 2015

Project Overview:
Thinking Space Systems recently installed control room furniture at a brand new Cyber Security Operations Centre for cyber specialists Falanx Assuria. A total of five consoles were designed and installed, accommodating eleven Cyber Analysts in total, and all complete with the new Moni-Trak perfect positioning rail, as well as an Evolution media wall and low level storage units.

Case Study

New Cyber Security Operations Centre for Falanx Assuria

Overview of client

The Falanx Group are a security and intelligence provider, employing a team of security professionals and technology experts who work closely with clients to help them defend against global security threats. Having recently set up a new cyber security division, Falanx Assuria, they now provide world-leading cyber defence solutions to government and private clients from their brand new Security Operations Centre, the first suite of its kind, with more to follow internationally.

Scope of the project

Following an enquiry from their website, Thinking Space was tasked with designing furniture to accommodate eleven Cyber Analysts and Supervisors within an office which had yet to be found. All had very specific tasks to perform, working within three teams. The challenge was to design the consoles to allow each team the ability to converse with each other, whilst still being able to view the Evolution media wall at the front of the room. Thinking Space has the clear engineering advantage when designing such consoles; their Core Assembly System offers limitless possibilities for bespoke builds.
