

University control room focus 2015

Technical furniture manufacturers' Thinking Space Systems, continue to transform the security control rooms at Universities around the county...

Planned appearance of the new control room at Newcastle University

Control room furniture for Newcastle University

Thinking Space have just been awarded the contract to supply Newcastle University with control room furniture for their security offices in the main campus.

Thinking Space have designed a two operator console and a single operator console, complete with underdesk storage and curved end panels with their university logo. In addition, an Evolution media wall in the room will provide mounting for six 46" screens, positioned ergonomically to allow for optimum viewing by operators.

Work will commence on the manufacture of the consoles and media wall at the end of April from their factory in Hampshire.

Introducing the Moni-Trak...

Due to popular demand, Thinking Space have developed a new concept for the ergonomic positioning of your flat screen monitors along the length of the desk. The Moni-Trak is a flexible solution consisting of a rail with monitor columns and Novus mounts, which can be fitted at any point along the rail. The columns can be moved along the rail at any point with ease.

Watch the Thinking Space video explaining the Moni-Trak features and benefits, as well as how to position your equipment.

See us at AUCSO!

Thinking Space will be returning once again to the AUCSO conference 2015. Held at Loughborough University from 14th-16th April, Thinking Space will be available at stand S15 to answer any questions you may have regarding your security control room requirements.

Thinking Space return to Loughborough University after completing the installation of their new security control room in 2012. Why not ask the hosts for a quick visit to the control room whilst at the event, to see for yourself how Thinking Space can transform your control room.

Loughborough University

Universities revisited...

Last year, Thinking Space went back to university... to the security offices at the University of Warwick and London South Bank University. In tow; a video camera and the company's latest recruit, a videographer. The reason? To create a video case study of each CCTV control room. The purpose? To explain how Thinking Space can transform your environment with their ergonomic technical furniture solutions.

Watch these videos on the Thinking Space YouTube channel, where you'll find other case studies and information videos explaining how we manufacture our furniture.

THE UNIVERSITY OF
WARWICK

Project overview:

Thinking Space designed the University of Warwick's new control room, a compact room where the illusion of space was required, as well as accommodating a large quantity of equipment.

Thinking Space designed and installed:

- a two operator console
- two stand-alone storage units
- Evolution media wall for 3 x 3 large flat screen monitors
