

Seasons greetings from Thinking Space Systems

Well, what a year it has been!

Over the last twelve months, we are proud to have been involved in some great control room projects around the world, helping to transform the wellbeing and working practices of our clients through innovative furniture solutions.

There are so many highlights to choose from but my personal highlight is our growing presence in the USA, after we completed our first control room project here in November for clients CNL Software. At the beginning of 2017, I will be basing myself in the USA, to build on the existing efforts our team in the US and Canada has already started on. Meanwhile, we are now manufacturing our furniture in Australia, and will be exhibiting at the prominent Avalon ATC show in February.

As well as our international offices, we now have 37 staff employed at Thinking Space HQ as seven new members joined us this year. It gives me great delight to see the number of ladies increase to six now, and back in June we celebrated as three more of our team received their 10 year long service awards. A great achievement and illustration of our company culture, where we now have a sales team with 150 years experience in the security sector and console sales, and a team who speak five different languages along with a host of international cultures to share.

As we look forward to an exciting 2017, on behalf of everyone at Thinking Space around the world, we wish each and every one of our clients, suppliers, colleagues and friends a very Happy Christmas and a prosperous New Year.

Control room console for USA demonstration centre

Thinking Space has recently completed a control room console installation in the USA. Undertaking the work for clients' CNL software, a two person console was designed and manufactured for the new regional offices and Integration and Demonstration centre at Ashburn, VA. As part of the clients' expansion plans in the USA, the new facility is designed to replicate real world security challenges.

This console installation was undertaken by Thinking Space local representative, Kevin Johnson, and includes the Moni-Trak perfect positioning rail, Novus monitor mounts and tablet holder, PC storage, underscript blue LED lights and end panels with the client's logo. The end result is a fantastic looking demo room.

New Plant & Process brochure

Our latest brochure for the Plant & Process sector is now available to download as an interactive pdf. Featuring case studies and examples of typical features, we hope it provides plenty of inspiration for your next project.

See us at...

Our International sales team will be exhibiting at the following events over the next three months. Look forward to seeing you there!

Intersec 2017

22nd - 24th January
Dubai, UAE
Stand C42 hall 2

Avalon 2017

28th Feb - 2nd March
Geelong, Australia

World ATM Congress

7th - 9th March
IFEMA Madrid
Stand 1235

A fusion of products for Bristol City Council

Thinking Space are currently completing the installation of control room furniture at Bristol City Council. As well as a requirement for 18 height adjustable desks and 24 static consoles, a large media wall has been created. The curved media wall, which dominates the main control room, has been created from a fusion of Evolution and Thinking Space Core Assembly System profiles, which has then been clad with plasterboard to create the wall structure.

Introducing two brand new brochures

Kanya have recently launched two new catalogues to incorporate their latest updates to the aluminium extrusion range.

"Product Innovations" features the latest accessories now available to purchase, and "Systems Profiles base 45mm" features the brand new profile range, the 45mm base extrusion, which has recently been launched. Both brochures

are available for download from our website, or you can request a printed copy from our sales team. Look out shortly for the brand new Kanya catalogue, featuring all these latest products in one place.

New telescopic monitor arm now available

Novus has recently launched the TSS telescope arm to add to their range of ergonomic monitor arms. This arm offers straight extension so useful in cramped spaces and are now available to order from us. Ask our sales team for a quotation or further information.

New edit desks at the University of Leeds

MW Video Systems have recently provided 5 edit desks at the University of Leeds for the School of Media and Communication department.

One 2400mm wide desk and three 1800mm wide desks from the MW Video standard product range were provided. The desks, complete with mains distribution units, are finished with black nosing and volcanic ash marmoleum worktops.

The School of Media and Communication is one of the top departments in the country for the study of communication, media and culture. With investment in new facilities needed, a specially refurbished state-of-the-art building at the heart of the Leeds campus was created. This prompted the school to look for new furniture for their new media suites. After visiting the MW Video Systems website, contact was made and the standard edit desk range proved to offer an affordable, yet high quality solution.

One of five edit desks delivered to the University of Leeds

"We found MW Video to meet our needs perfectly. The quality of the desk solution is first class and I would happily recommend MW Video to anybody wanting cost-effective specialist broadcast furniture", praised Andrew Thorpe, School General Manager.
