World ATM Congress 2019
12-14 March | Madrid, Spain | IFEMA, Feria de Madrid

See us at
Stand 240

Control room furniture specialists Thinking Space Systems, will be returning once again to the leading Air Traffic Exhibition, World ATM Congress 2019 in Madrid, from the 12th to the 14th March. At stand 240, we'll have a wealth of demonstrations to show you and advice available. Here is our roundup of what to expect at Stand 240.

International focus

New for this year, Thinking Space will have a truly international presence as our partners from around the world will also be attending the event. Below, left to right, James Groundwater (Canada), Kevin Johnson (USA), Wayne Palmer and Paul Roberts (UK), and Lee Evans (Australia). Come and meet the team and learn more about the work Thinking Space have undertaken in the Air Traffic industry.

Air Traffic environments

Thinking Space are an experienced supplier of Air Traffic tower, radar, simulator and training room technical furniture solutions. We have delivered installations worldwide for both commercial and military applications, customising solutions to suit each individual environment.

"The most productive control rooms have the best balance between space, people and technology" explains Managing Director Wayne Palmer. "To achieve this, we adopt an operations-centred design approach for your control room. At the show, we'll explain our three step strategy, which starts at the information gathering stage, with site visits and sight line surveys. We then move on through the consultation process with outline design and finally full design. This can include mock up consoles for your evaluation".

At our stand, you'll also discover the many case studies and site references we have undertaken over the 15 years of business. Read our case studies at www.thinking-space.com/case-studies.

Printed panel solution

At stand 240, we will be demonstrating the brand new printed panel and printing production line, which is currently in the commissioning phase. Two examples of air traffic consoles will be available to view at the stand, each giving a good representation of a console suitable for radar and tower environments. Both will have the printed panel solution applied, showing the wealth of possibilities open to customising your console in the future.

We'll be offering our regular finishes in printed format, as well as adding some brand new patterns to the selection. Choose from gradients, textures and graphics to customise your console. We can even add your logo to the panels, or print your customised artwork. And you'll even be able to try it out online with our product configurator, helping you choose your finishes. The possibilities are endless!

Visit the Thinking Space YouTube Channel to watch our printed panel introduction videos

ATC resources

Thinking Space have a specialist brochure to highlight the particular requirements of Air Traffic environments. Pick up a copy at stand 240 or download it from our website.

We've a selection of Air Traffic videos available to watch on the Thinking Space YouTube channel, as well as company videos all about our furniture solutions.

Discover our ATC sector video and Manchester Airport case study video, amongst over 30 others to choose from, including height adjustment and cable management solutions.

ATC accessories

Thinking Space have worked with Air Traffic clients over the years to create accessories which aid workflow and improve ergonomics in your control room. We've revamped our accessories library to bring you the very latest in solutions offered. And if there's something missing, get in touch and we'll work with you to create a bespoke solution. With just a few of the selection shown left, discover the full range at our website www.thinking-space.com/accessories.
