Corporate branding

Read our case study
www.thinking-space.com/case-studies

"We really are pleased with the quality of service you have provided us from end to end...From sales to design, project management and installation everything has been delivered to quality standard and one your company should be proud of...I would have no hesitation to recommend you to anyone".

Mark Daly, Bluegrain Security

CCTV control room furniture for Bluegrain

The use of a feature wall, console end panel and printed panel solution was the key to a corporate looking control room, when security consultants Bluegrain approached Thinking Space for control room furniture.

Initially requiring an Evolution media wall for their new control room, Bluegrain saw the possibilities for creating a corporate look and tasked Thinking Space with creating a security services management console for the room. Accommodating two operators in a curved console configuration fitting neatly in front of the media

wall, operators are able to view and monitor CCTV footage for their clients in an ergonomically-friendly way.

Using the new product configurator offered by Thinking Space, Bluegrain were able to choose colours for the worktop and panels to complement the colour scheme of the room, and their blue and pink logo. The resulting control room looks clean and efficient, with a definite "wow" factor.

Air traffic training application

Military Training Suite furniture for NATS

Thinking Space have recently provided Air Traffic Training furniture for NATS at their Swanwick Control Centre. Required for the new Military Training Suite (MTS), Thinking Space designed and installed custom designed consoles for 8 operators and a supervisor position, set in a horseshoe shape around the room.

Between each operator, acoustic panels provide privacy during examinations, which can be removed when more informal training is being undertaken and stored in a purpose-designed rack when not required. In keeping with the calming green colour scheme within the room, Thinking Space provided green under script LED lighting for a feel-good glow.

The completed facility allows for informal and formal learning to allow the Military Customer at NATS Swanwick to initially develop Methods of Operation and Training objectives for the new ATC platform that NATS are delivering as part of SESAR.

"Thinking Space Systems really listened to what it was we wanted to create in both look and feel. The design work was essential – we worked collaboratively to achieve the best room layout and design for the new training suite...."

Dina De Souza, NATS

Height adjustable consoles custom Evolution mounts

Tamar Crossing control room upgrade

After meeting Thinking Space at a networking event in 2012, we provided control room furniture for Tamar Crossings' brand new control room which monitors traffic and toll plaza activities over the River Tamar. A three-position console shaped in an L-shape around the perimeter of the room was designed, with each operator position having individual height adjustment for sit/stand working. At one end of the console, a raised circular worksurface provides a handy meeting space. In addition, a single operator console for training purposes was also provided. To ensure operators could view the bridge below, Evolution media wall mounts were fitted to the ceiling of the control room, where the seven screens showing CCTV footage can be monitored.

Mobile assembly workbenches

Kanya UK have provided a mobile workbench solution using Kanya extrusions, Core Assembly System profiles and Evolution Media Wall components. The workbenches are ideal for assembly work as they are height adjustable, with pre-set positions for sit-stand working. This makes them ideal for construction work, packing and lifting tasks. Battery packs are used to power the height actuation, meaning that the workbenches can be located anywhere in the factory.

NEW CLU monitor arm

Novus have recently launched a brand new monitor arm to add to the MoreSpace range. The Novus CLU is a lightweight monitor arm with gas-assisted spring technology. Three models for desktop are provided with a 3-in-1 table mounting solution. Screens can be mounted and tilted horizontally and vertically. The CLU monitor arm comes in a choice of three colours: black (above), white or silver.

Just some of our upcoming projects:

- Tentec Security Solutions
- University of Notre Dame
- Abu Dhabi Ports
- St Stephens Shopping Centre
- Warrington Borough Council
- Cobham Mission Systems

News...

Thinking Space have recruited five new members to the team since the beginning of the year. The first to join Thinking Space was Josh Glynn (above left), joining us at the start of the year as Trainee Project Manager. Vim Prajapati (above right) joined us in March as a new Designer, who is currently working in the design proposal office. Hot on his heels was Darren Allen (left) joining us in April. No stranger to the console market, Darren is our new International Sales Manager. Piotr Namiel (centre right) joined the assembly team as Workshop Operative, and finally George Atkins (centre left) joined us at the start of the summer as a new Designer, who is now working in the design proposal office with Vim.

If you have an upcoming project, please get in touch with us at info@thinking-space.com or visit our website www.thinking-space.com
