

Seasons Greetings from Thinking Space Systems

Over the past twelve months we have had the pleasure of being involved in some really interesting projects, working with some great clients around the world. We've broken records for the tallest and widest media wall, for providing consoles to the UK's first digital ATC tower, and bringing the total number of University Security Control Rooms we've improved to 15. And speaking of the number 15, we will be celebrating our 15th Birthday in 2018, so we're looking forward to an exciting year ahead.

We would like to take this opportunity to thank all our customers, partners and suppliers and wish you all a very Merry Christmas and a Happy New Year. It has been a pleasure working with you all in 2017 and we look forward to working with you again in 2018!

"We were very impressed with the service offered by Thinking Space from start to finish. A thorough consultation process and first class visualisations gave me assurance that we would be provided with an exceptional environment."

"The installation team were very efficient and passionate about their work which was great to see. We're happy to recommend Thinking Space to others for any control room furniture requirements."

Samantha Redford, HR and Office Manager, Flexitricity

An electric performance at Flexitricity

Thinking Space Systems are proud to have created an electric performance at Flexitricity. After visiting www.thinking-space.com, demand side response pioneer Flexitricity invited Thinking Space to tender for their new control room project. This was necessitated by Flexitricity's expansion to brand new custom designed offices in the shadow of Edinburgh Castle. The new control room was to serve as a comfortable working space for Flexitricity's operations team and also as an attractive showcase with a viewing gallery, to impress visiting customers.

After successfully being awarded the contract, the manufacture and installation of a custom designed two operator console and Evolution Media Wall was required within a month, due to an important visit taking place. Giving an electric performance at Flexitricity, Thinking Space worked efficiently to design a control room with the wow factor!

Samantha Redford, Flexitricity's HR and Office Manager, commented: "We were very impressed with the service offered by Thinking Space from start to finish. A thorough consultation process and first class visualisations gave me assurance that we would be provided with an exceptional environment. The installation team were very efficient and passionate about their work which was great to see. We're happy to recommend Thinking Space to others for any control room furniture requirements."

Above: the render proposal drawings provided by Thinking Space assured the client that an exceptional environment would be created

Just installed...

Thinking Space have just completed an installation at McCarran Airport, Las Vegas. Our local representative, along with our Managing Director, headed out to the airport to install 7 consoles, some being height adjustable, and with curved contours to meet the clients requirements for room layout and operator positioning. The custom designed furniture is for a new security control room for the Department of Homeland Security...and all "securely" in place just in time for Christmas!

Exhibiting great service

Kanya UK have been exhibiting great service when they provided an aluminium framework support system for an exhibition stand builder recently.

Constantly working on new ways to break the mould, Coventry-based Priority Exhibitions approached Kanya UK to help them with a particular bespoke exhibition display. They had been commissioned to build a large double sided touch screen unit for Siemens and so

turned to Kanya Product Specialist Steve Taylor for advice on an aluminium framework support solution. The idea was to support nearly 3/4 of a ton of touch screen units using a modular system that could be assembled on site with pin point accuracy and speed.

Once the final design had been agreed and drawings approved, Kanya UK provided a kit of parts for the Priority Exhibition team to assemble on site.

Lewis Walters, Managing Director of Priority Exhibitions explained "Kanya not only provided a great solution in terms of product, they also worked on the structural design and helped us develop all support and fixing requirements. With prompt delivery and all round great customer support, I would not hesitate in recommending Kanya UK and Thinking Space Systems to anyone who needs a can-do approach from their suppliers. It's not always what you supply it's how you supply it."

For more information on application possibilities, head to www.kanya-uk.co.uk.

Blog...

Over the last twelve months, we have shared with you some informal moments here at Thinking Space, so here's a quick roundup:-

January: Our Employee of the Month award went to team MW Video, whilst Managing Director Wayne Palmer endured snowy climes with a trip to the USA.

February: Our three Directors headed out the Australia to support the Avalon Exhibition, whilst we announced our chosen charity for the year, Jane Scarth House.

March: We wore our gig T-shirts to work in the national "wear your t-shirt to work" day.

April: We hosted students in their work placement week, kicked off our TSS Bake-off competition and celebrated with a first birthday for one of the teams' first born.

May: Our TSS Bake-off winner was crowned; Alastair Bark beat the competition with some fine baking.

June: Our new table tennis table arrived...replacing the make-shift table and bats made out of cladding.

July: We celebrated a 10 year service award, and welcomed new recruit Gary Peters.

August: We toasted the arrival of a boy and a girl to two team members and held a family BBQ.

September: Our CNC operator Byron Clarke was awarded Employee of the Month.

October: We wore it pink for charity, whilst a hotel in Dubai made the extra effort to make us welcome with a "bake-off inspired" display.

November: The second of our 10 year service awards was presented to James Myall, whilst we worked hard to meet our clients orders and were treated to factory-made bacon sandwiches!

December: We said "Adios" to designer Antonio who is off on his travels, and donned our christmas jumpers once again.

Attenzia Lamp now with stand

Novus are excited to bring a revision to their LED task light range. The new Attenzia lamp, which was launched earlier, is a state-of-the-art lamp, perfect for stylish desks and workspaces. And now it comes in three shades and with the option of a stand for easy positioning.
