Security repacking desks for Liverpool John Lennon Airport

An amalgamation of the Thinking Space and Kanya product ranges was used to provide airport repacking desks for Liverpool John Lennon Airport. Thinking Space were commissioned by CCD Design, who were tasked with reviewing and improving

the passenger experience at the airport. As a result, two desks were manufactured using the Kanya aluminium profile system, powdercoated in the clients' brand palette, a vibrant blue. Each desk contains five tray inserts, printed with graphics to direct the passenger seamlessly through the experience. The result of the two desks and improved workflow saw a 15% increase in security throughput in the first six months, and continues to contribute towards the airports' strapline 'Faster. Easier. Friendlier'.

Bespoke desking

Overview

- 2 custom designed desks using Kanya aluminium profiles
- Digital printing services

Watch this space...

Just some of our upcoming projects to keep a look out for over the coming months:

- Central Bedfordshire Council
- Cwmbran Shopping Centre
- Royal Opera House London
- Guernsey Harbour
- St Gregorys Homecare
- Francis Crick Institute
- Flogas

Thinking Space will be 'Walking the Test Way' on the 26th September to fundraise for our charity Rose Road Association. Twelve of us will be walking the twelve mile route through the beautiful Test Valley countryside. Donations can be made on our Justgiving page: justgiving.com/fundraising/thinking-space-systems-wttw2021.

News...

Thinking Space will be exhibiting at The Security Event. We'll be at **stand 3a/L6** demonstrating our height adjustable console along with the latest resources, news and features we've recently introduced. Sales specialists Neil Walker and Jason Gregory will be looking forward to meeting you 'face to face'.

Evolution Media Wall upgrade

Back in 2010, Thinking Space Systems launched their Evolution media wall framework system for mounting large flat screen monitors. This system is perfect for CCTV control rooms, where video wall displays are required.

Around a year ago, our design team were tasked with improving the product after receiving feedback on its design and assembly from our customers as well as the sales team demonstrating it. As a result, a revision of Evolution is now in the making, as we prepare to launch the Evolution Media Wall 1.

- New foot design – this is now heavier, providing more stability as the size of screens has increased since 2010. It also is more aesthetically appealing and less intrusive.
- Easier to assemble – legs are despatched already assembled with fixings provided in situ, saving time with site assemblies.
- Enhanced cable management – pre-made slots in the cable trays to allow for cable ties. A new divider now separates data and power supplies in the tray. The post is wider allowing for easier cable management within the leg.
- The height of the crossbeam has now increased to provide greater strength and stability, which reduces deflection.

- The crossbeam is 50% stronger, which allows for larger spans between each leg.

We offer standard configurations as well as custom designs, all included within our free design service. The Evolution Media Wall 1 will be available from October 2021.

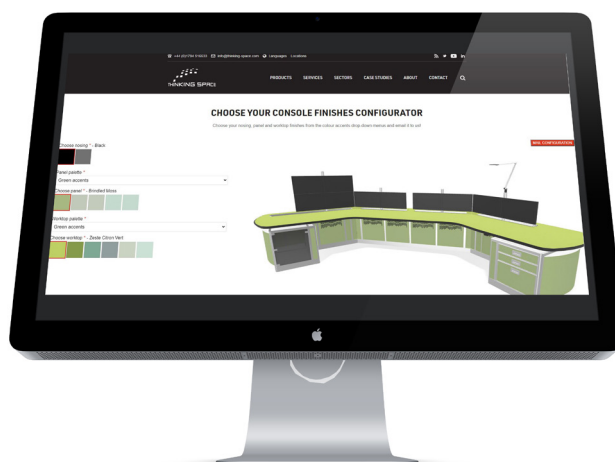

New colour collection for your console

Thinking Space are delighted to announce that the new 2021 colour collection for your control room furniture is now available.

After the successful launch of the new printed panel in 2019, the finishes have been updated to reflect the latest trends in the office world for 2021/22.

A wider range of finishes are now provided, helping you to team your corporate identity and enhance wellbeing in the control room. Choose from 35 worktop finishes and 34 panel finishes to complete your furniture, choosing either at proposal stage or when you are ready to place your order.

So what's new? The 2021 colour collection brings together a greyscale base palette for you to choose from and adds colour accents in the main colour groups – either as a worktop or panel finish. We're also now offering two textures, spots and mezzotint, which can be used as the base pattern for any colour combination, as an additional service. Our custom service also includes the application of your own images onto the console, whether

it be on one curved end panel such as a logo, or running around the length of the console with a unique design. Ask your sales representative for further details about our furniture finishes range.
