City of Steel Boasts Brand New Control Centre

The UK's 5th largest city (by population) and home of steel - Sheffield - now boasts a brand new CCTV and traffic/bus lane enforcement control centre.

After a lengthy planning and consultation stage, specialist integrator TIS of Mansfield won the main contract to supply clients Sheffield City Council and KIER with a total technical upgrade and a brand new control centre. Operations to manage the area's CCTV and the city's traffic/bus lane enforcement are centred here within the magnificent Town Hall building.

Thinking Space was chosen to supply a complete suite of technical furniture for both sections of the control centre for staff totalling 10 persons. Bespoke storage units form part of the suite, ensuring safe and neat stowage of personal and operational equipment.

Made using CAD/CNC construction techniques and built from aluminium and composite materials, the furniture exceeds regulatory requirements and is blended with modern aesthetics to create attractive and fully functioning technical furniture, perfect for this high-tech environment.

This brand new facility was soon put to the test with a major political party conference that took place in the city as well as several other major sporting and cultural events at venues around the city.

Don't Miss Us At...

BEST Exhibition

11-12 October 2011

Come and see us at the British Exhibition of Security Technology (BEST) held at the Victory Services Club, Marble Arch, London, where the latest innovations from British manufacturers meet in a friendly, local environment.

EBOC Exhibition

18-19 October 2011

Britain's Energy Coast Business Cluster are hosting their second 'all energy event' to highlight invaluable information on contract and market opportunities in sectors ranging from nuclear, to renewables, to oil and gas. Come and see us at the event, being held at Energus, near Workington.

Global MSC Exhibition

7-8 November 2011

The next Seminar and exhibition of cutting edge security technology and service providers, being held at the Marriott Hotel Gosforth Park in Newcastle.

Tram Success for Thinking Space

Scotland's capital city Edinburgh is returning a tram network to its city streets.

This large and complex project has been followed closely by the media and has at times attracted political discussion, particularly of course in Scotland. The scale and complexity of the work – and the emphasis of delivery a high quality system - has brought overruns, but the role of Thinking Space was clear, proceeded smoothly and met all project criteria.

Thinking Space supplied a complete suite of control room furniture and an Evolution media wall into the purpose built control room that overlooks the marshalling yard and depot. All control, technical and customer support services will be managed from the control room making the specification of the control room furniture comprehensive and highly technical.

Technical Furniture for Procter & Gamble

Thinking Space has been working with Procter & Gamble for the last few years to provide a variety of solutions for its large UK manufacturing sites.

These solutions have included complete control room fit outs and individual process control desks for managing packaging and production lines.

The technical furniture has been installed in partnership with the new electronic integrated systems that manage Procter & Gamble's various processes. The flexibility of the TSS desks has allowed installations directly into the working areas without disruption to production.

The latest installations have included single and twin standing control desks for their liquid production lines.

Medway Tunnel Control Room Relocation

Thinking Space have recently completed the control room works required for the Medway Tunnel project.

Thinking Space worked as part of the successful Contractors package to update and install a new SCADA front end for managing the Security, COMMUNICATIONS and Traffic Management systems.

The works were split over two phases, with the first being the relocation of the control room at the tunnel site. Thinking Space installed new flooring, ceiling, lighting, decoration and bespoke control room furniture for the new space. Downlighter rigs were fitted for providing the operators with dimmable task lighting. The second phase was to install new control room furniture at the existing Medway Council (CCTV) control room.

Both projects included solutions from the Evolution Media wall range. The Council site included the open framework design, the tunnel site incorporated the built in storage unit solution.

Kanya Solution for Bespoke Gravity Conveyors

Thinking Space have designed and manufactured a number of bespoke gravity conveyors for a supplier to the automotive industry.

The conveyors are all manufactured from the Kanya aluminium build system and are purpose built for the application required.

The conveyors are fitted on lockable castors to allow easy positioning on the factory floor and include an adjustable packing stop to allow boxes to be inspected and sealed.

Thinking Space offer a free design service which can be used to create 3D rendered images as part of all sales proposals.

New Recruits Join Thinking Space

Two new faces have joined our team this month. Myles Street joins Thinking Space Systems as an Installer, fabricating consoles and control panels in our busy workshop and undertaking site installations. Having previously worked as a granite and marble installer for the past 9 years, Myles brings a wealth of experience in installation work and project management skills.

Suzanne Pinchin has also joined Thinking Space Systems as a Sales and Marketing Assistant, who is tasked as the new Novus representative, as well as supporting the sales team, and promoting our company. Suzanne is a qualified Graphic Designer with marketing experience having previously worked for a fashion forecasting company, and also has experience working in the construction industry as a Property Manager.

Thinking Space Recruits Techniche

Thinking Space have announced their new relationship with Australian Security Company, Techniche. Techniche Security & Surveillance provide a complete service from design and implementation of building management and security systems, to the training of technicians and operatives. They will represent Thinking Space in Australia and the eastern hemisphere.
