Control room furniture for new state of the art suite at Boston Borough Council

Thinking Space has just completed the contract to supply control room furniture for the new CCTV control room at Boston Borough Council. As part of the "Spend To Save" initiative, Boston secured funds to invest in the next generation of town centre CCTV monitoring solutions. Based in the CCTV suite at Municipal Buildings in Boston, the new system is the first in the country to use this particular state-of-the-art technology, now boasting a wireless CCTV system, improved camera technology

and a new control room with custom made furniture for the three operatives.

Working with facilities management provider OCS, Thinking Space were tasked with designing and installing a new console for the three operators, a media wall to house eight large flat screen monitors and storage cupboards for the new equipment.

Named the Roy Clark CCTV Suite, in memory of a well-known and fondly remembered colleague, the new control room was officially opened MP Mark Simmonds with a commemorative plaque. Representatives involved in the project were invited, including our Jason Gregory.

An update on international projects...

Over the summer months, we've been busy installing control room furniture for security and plant & process environments worldwide. We've carried out a number of projects in Qatar, and have just won a contract in Jordan. Watch this space for further details in the future.

Our furniture is ideal for exporting worldwide, as all furniture is easy to self-assemble, or can be installed by our team of fitters.

If you have a project you'd like to discuss with us, we have offices in Dubai and Australia, as well as an Export/International Sales Manager to assist you with your project.

Approach control room furniture for Malta International Airport

A meeting at an exhibition the previous year has led to a project to provide air traffic control furniture for Malta International Airport. Thinking Space was awarded the contract to provide furniture for its approach control room.

Having just completed production, Thinking Space welcomed Malta ATC to undertake a factory inspection of the furniture (see photo). The consoles are configured in a hexagonal shape with 9 operator positions. Due to the positioning of the furniture inside the room, the client requested privacy screens be erected to the rear of the console, to reduce sound and distractions from staff passing by. Novus MoreSpace monitor mounts allow for multi-screen positioning at each operator position.

Having just celebrated a record 9.2% growth in passengers for the first half of 2013, the airports' ATC operators will soon be looking forward to improved facilities.

Brilliant framework solutions

Brilliant Laundry contacted Thinking Space with a request for a framework to improve efficiency in counting their laundry products. The idea was to manufacture a framework in the shape of a tunnel that would allow sensors to be attached to it to detect electronic tags which are sewn into the linen products.

Thinking Space completed a bespoke design using the range of Kanya aluminium extrusion profiles and accessories to suit the client's requirements. The brief was to allow for specific positioning of the sensors around the framework without getting in the way of the crate of linen being pushed past them.

The Kanya aluminium extrusion is an ideal solution for building the framework. The lightweight construction is easy to assemble from a kit of parts and the adaptability factor of combining the use of panels and mesh into the 8 mm extrusion channel has created the ideal solution to improve the efficiency of counting Brilliant Laundry's products.

New catalogue now available to download

Novus launch new MY range

New for 2013, Novus have launched the new MY range of monitor mounts and a tablet holder. Bringing a simple yet stylish solution for mounting lighter weight monitors (up to 6kg), the range is ideal for office environments. Single or dual monitors can be mounted and even a monitor and tablet combination. Choose from our sets or individual components to make up your own combinations.

For more information, request a brochure or to see a demonstration, please get in touch with us at info@thinking-space.com.

Enclosed monitor wall solutions

Thinking Space have just completed an enclosed monitor wall for a northern transport company. Using Evolution as the framework and fixing method for the screens, the whole structure has been clad in removable composite panels.

This is a typical example of how adaptable the Evolution media wall system is. Any configuration can be developed to create a central viewing area of monitors (see photo left).

With a free design service available, undertaken by our expert draughtsmen, the possibilities for your project are endless.

New Appointments

Thinking Space have welcomed two new recruits over the summer months. Ollie Atkins joins us as a Sales Administrator, whilst Isabel Lopez joins the design team as a draughtsperson.

Thinking Space celebrate 10 years

Thinking Space celebrated their 10th anniversary in the summer with a family outing to the Hawk Conservancy in Andover. On a gloriously hot day, we enjoyed watching the flying displays as well as holding a hawk.
