

improving working environments

Security Furniture Upgrade for London South Bank University

BEFORE: The cramped and oppressive control room prior to the refurbishment

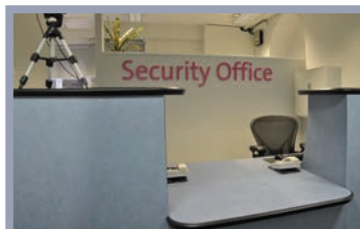

AFTER: The new light and spacious security control room

Thinking Space Systems have also upgraded control rooms at Universities in Bristol, Birmingham City, Loughborough and Warwick

As part of a larger project to upgrade the security control room and office environment at London South Bank University, Thinking Space was tasked with designing and delivering the furniture and workstation solutions. Working alongside the principle contractor, Thinking Space delivered a main control room desk for 2 operators, increasing their useable desk area and improving workflow. A separate supervisor desk was also provided, as well as a bank of low level lockable storage units. Glass doors on the units add to the light and spacious feel of the whole room, which prior to the refurbishment, was a dark and oppressive workspace.

To complete the project, Thinking Space was then tasked with the design and provision of technical furniture for the security office front desk. Thinking Space provided an ergonomic solution to the split level nature of the environment and the need to create a low level desk area for wheelchair visitors. The result is a modern and easily accessible reception area. As UK distributor for Novus MoreSpace products, Thinking Space supplied both areas with Novus monitor arms to hold flat screen computer monitors, which creates more desk space for operators.

New Control Room for Warwickshire Fire & Rescue

Thinking Space were the successful furniture manufacturer chosen by Warwickshire Fire & Rescue Service to design and supply furniture for their new Control Room. The design includes 6 new desks with 6 fully operational positions. All desks are fitted with Novus slatwalls, adjustable monitor arms and laptop holders.

Using products from the Novus More Space range gave the design the edge as it allows the opportunity to adjust, extend and add items from the system as required. Thinking Space worked closely with Warwickshire Fire & Rescue Service to come up with the layout of the room and the specific requirements of each desk position. 6 24/7 chairs were also supplied to complete the design. The Control Room is due to go live later this year.

News

Thinking Space Dubai Office Now Open

Thinking Space are delighted to announce that their new Dubai office is now open for business. As part of the company's ongoing international expansion, the office will service the needs of local clients in the United Arab Emirates, who are interested in control room furniture for ATC environments, as well as plant and process, broadcast and transport sectors.

Thinking Space Appoint New Export/International Sales Manager

Thinking Space Systems are pleased to announce the appointment of Steve Hooper as Export/International Sales Manager, to support the company's continuing growth in international security control room furniture sales.

Steve joins the company with over 13 years experience in the security industry.

Bespoke Monitoring Console For Pennant Training Systems

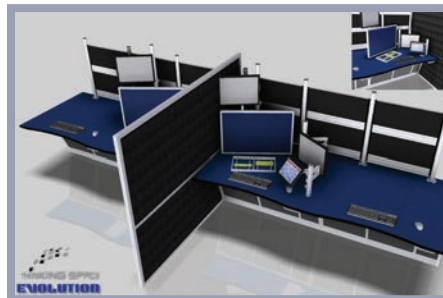

Thinking Space have designed and manufactured a bespoke monitoring console for client Pennant Training Systems. The project required an extensive selection of parts from the Kanya product range, including different types and sizes of the aluminium profiles with worktops and panels. Using Kanya aluminium extrusion as the main framework with a combination of racking and doors, hinged vented panels are also provided to ensure cooling of all equipment housed within the workstation.

Novus MoreSpace monitor mounts were also used to mount two flat screen monitors on the console. As UK distributors for Novus and Kanya, this is a perfect example of the benefits a client can expect from using Thinking Space as a partner for their specific requirements.

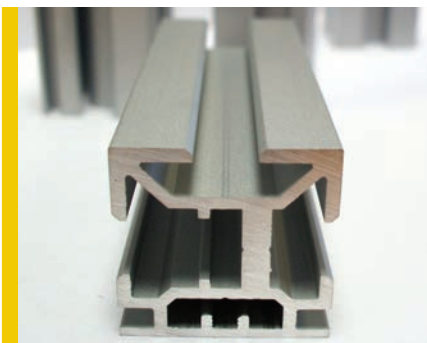

ATC Training Consoles Head to Abu Dhabi

Thinking Space have just completed the design and supply of four bespoke training consoles for client GAL LLC. The four consoles were shipped to Abu Dhabi for easy installation by the client. Each training console is designed for up to four users, two trainers and two students. Each console includes an acoustic panel with a removable section between the operators. As part of the project, Thinking Space also provided Novus monitor arms and upstands for fitted equipment to be used on the worktop. 24/7 chairs were also provided, ensuring maximum comfort for operatives.

Research & Development

CORE
ASSEMBLY SYSTEM

New for 2013, Thinking Space introduce the new Core Assembly System. The new aluminium extrusion range will be at the "core" of all future Thinking Space technical furniture solutions, replacing the previous TSS build system, developed by Managing Director Wayne Palmer over 10 years ago.

The new extrusions are larger and up to 50% heavier, offering furniture solutions with greater strength and support. In fact, it will offer such stability that furniture will be able to support the weight of a human or two!

With a larger selection of profiles, the build system provides a wide range of solutions and finished shapes, giving the customer more choices. With new easy to fit connectors, assembly time is reduced. Consoles can be sent to site for the client to easily assemble using just four tools, which will be supplied with each console.

Look out for further details and demonstrations at forthcoming events...
