

improving working environments

Over the last twelve months, Thinking Space Systems are proud to have transformed a wide variety of control rooms, helping to improve working environments worldwide. As well as a host of exciting new projects, our highlights over the year include the formation of new company Thinking Space Systems Pty in Australia. We also increased our presence around the globe, exhibiting at Trade Shows in Dubai, Malaysia, Madrid and the new IFSEC International show in London. We're looking forward to 2015 packed with new products and further product developments to bring you. We wish all our clients and colleagues a very Merry Christmas and a prosperous New Year.

Security control room fit-out at Manchester Royal Infirmary

Thinking Space were awarded the contract by Chubb Fire & Security and Redworth Associates to modernise the security control room at Manchester Royal Infirmary. The existing control room was gloomy and dark with outmoded and worn-out wooden control desks. The technical systems were to be upgraded and modernised in keeping with the latest building management and

security technologies. A total re-fit and re-configuration of the room was required by Thinking Space to ensure both an effective service to the hospital, and to provide a modern, safe and comfortable working environment for managers and operating staff.

Bob Chestnutt (ASMS)(MIPSA) Security Manager from Sodexo Healthcare commented "We are very pleased with the professional approach, negotiation on the brief, subtle tweaks to achieve the final result.... implantation and fitting was excellent using quality of materials and demonstrable skills by all concerned. I would recommend Thinking Space and have no hesitation in suggesting our room is available for viewing".

Simulator console at Bristol Airport

Thinking Space have a wealth of experience creating solutions for Air Traffic Control environments. Working closely with clients NATS, a new 2 operator customised simulator console has been recently installed at Bristol Airport.

The console has been manufactured using the Core Assembly System with Novus accessories to display the long range radar display. Three vertical Novus columns with large screen mounts are also fitted to the rear of the desk to display 3 large 48" flat screens. Underscript PIP panels and 5 equipment caddies have been built into the desk framework, as well as cable management for free standing equipment.

Christmas opening hours...

Our premises will be closing from 17.00 hrs on Wednesday 24th December and will reopen again at 0900 hrs on Friday 2nd January 2015

See us next year at...

Control room modernisation for Nottingham Trams

An extension of the Nottingham tram network system has led to the modernisation of their operational control room, with Thinking Space supplying their new control room furniture. With a total of four consoles, including two large 7 metre consoles, all contain underscript LED lighting, curved end

panels, corporate logos and colour scheme, Novus monitor mounts and special storage for technology servers. Thinking Space have also designed and manufactured a large Evolution media wall with mounting capacity for 12 Pelco 55" large flat screens. The project is currently in progress, being carried out in planned stages to ensure the control room remains near 24 hour operational, to serve the tram users of Nottingham.

Machine Guard Solutions from Kanya

At the Machine Building Show in September, Kanya UK launched their new modular machine guarding system, the TS Guard. The new concept uses Kanya aluminium profiles and accessories to create an off-the-shelf, easy to assemble solution, available in a choice of finishes. It proved the ideal solution for regular clients Planters Clayton, who were looking for a safety installation around their machine presses, and chose a black and yellow finish for added safety.

New brochure and products from Novus

A brand new ergonomic accessories brochure is now available. Featuring all the favourite MoreSpace products, there are a few new additions to the range. These include the Novus MY monitor arms now in white, and a new range of larger screen monitor mounts. The Screenmount range are a sturdy wall, floor or ceiling mount for screens weighing up to 100kg and up to 70 inches in size. An ideal solution for complimenting the modern look of larger screens in reception areas, offices, conference rooms and public areas.

Christmas Capers...

We all gathered for our company christmas party at the Potters Heron Hotel. With silly balloons and bad cracker jokes, we danced the night away...

Patrick delivers some Christmas cheer...

We welcomed our Novus Key Account Manager Patrick Niehoff, who brought us the latest news on the Novus product range.
