

Case Study:

LBO Harrow

Welcome to the TS Spring 2023 Newsletter!

Welcome to our first newsletter of 2023! We hope everyone has survived the colder months and is ready for the joys of spring! As always, we are keen to share some adventures of the Thinking Space and Kanya UK teams from the last few months....

Overall, both businesses have been thriving since late summer and we entered the new year with good forward order books. As a result, we've been recruiting new staff in all departments and growing the teams again. Long may it continue!

Above you will see some images of a completed control room project for the London Borough of Harrow. Thinking Space worked with systems integrators DSSL in designing and delivering furniture for a challenging tiered workspace. As you can see the final solution looks great! More details opposite...

Key Requirements

The height adjustable consoles with LED footwell lighting helped create a dynamic modern environment for the Council's public space CCTV control room. The tiered design provides different viewing angles of the large video wall.

PR & WP Trip to Washington Office

In November, Wayne and Paul visited our US office to finally catch-up face to face with Kevin Johnson, our head of operations in the States. Whilst in Washington, the guys visited the ATCA Global conference and met with contacts in the Air Traffic industry. Longer term plans for the US market were on the agenda and of course they found time for a beer.... or two!

ATCA Global Event in Washington

Company News

Upcoming Projects

University of Portsmouth	LBO Tower Hamlets
Bournemouth Airport	Hampshire Police
Association of British Ports	National Exhibition Centre

Cooling Fans

A number of Thinking Space consoles have been fitted with cooling fans to help increase the airflow within the desks. The fans really add value in hotter environments and for consoles with larger amounts of equipment enclosed. All fans are carefully positioned to maximise the airflow in line with natural convection. The fans are connected to a control unit that provides a temperature reading and manages their speeds.

Paul scores big with his super World Cup Bake-Off cake!

In November, 12 members of staff competed in our in-house Bake-off competition for the title of Head Baker. The final was an all-male occasion, with Paul Atkins emerging as the winner for his outstanding world cup stadium cake. Congratulations to Paul! The competition raised funds for our current local charity, George's Trust.

A busy start to the year - Check out a real chocker TS factory!

The factory is currently full with TS furniture and Kanya builds further to the receipt of a number of large orders. Build space is hot property on the shopfloor, with our production team fighting (not-literally!) for room to assemble. Nice challenges to have after the quieter covid times!

New Kanya Website

We have teamed up with Digital Storm, a local integrated design & marketing agency, to help us refresh our Kanya website as we go into 2023 - we're loving the progress so far.

Keep your eyes peeled for the launch of our new site!

In the press

Southern Manufacturing Show

Kanya UK exhibited at the Southern Manufacturing show where they showcased their custom workbenches and trolley solutions for industry. The show has always been successful in generating new opportunities and contacts for the Kanya product, and this year was no different. Wayne, Connor, & Neil were all busy during their stints on the show stand.

Upcoming Events

CANSO 7th - 9th March & TSE 25th - 27th April

Thinking Space will attend Airspace World event in Geneva in March, where key players in the Air Traffic industry will showcase technologies and share advancements. We'll promote furniture for tower, radar, simulator and digital tower applications. Wayne, Paul and Darren will be there, come say hello!
